RENZO ISAAC TAKEDA MENDOZA

Caloocan City, Philippines | wwkkrenzo@gmail.com | (+63) 905 136 3895 | linkedin.com/in/renzotakeda |
github.com/Vercii | https://www.renzotakeda.site

PROFESSIONAL SUMMARY

Computer Science graduate with hands-on software engineering experience supporting production applications through functional and regression testing, defect identification, troubleshooting, and data validation. Experienced with REST APIs, SQL, JavaScript, databases, and Agile SDLC practices, with additional hands-on experience building automation workflows using n8n and Google Gemini. Seeking an entry-level role where strong analytical skills, attention to detail, and software development experience can contribute to reliable, high-quality applications.

TECHNICAL SKILLS

Software Testing & Quality: Functional testing, regression testing, defect identification, data validation, SDLC, Agile/Scrum, audit logging
Programming & Scripting: JavaScript (Node.js), SQL, Python, Bash (basic)
APIs & Integration: REST API design & integration, JSON, Amazon API Gateway, webhooks, IMAP email integration, third-party API integration
Databases & Data: Supabase (PostgreSQL), Amazon DynamoDB, data modeling, Appsmith
Automation: n8n workflow automation, workflow design, validation rules, decision logic, automated pipelines
Cloud & Infrastructure: AWS Lambda, AWS Amplify, Amazon Cognito, IAM, Docker, Docker Compose, Linux (Ubuntu/Fedora)
Tools & Networking: Git, GitHub, TCP/IP, DNS fundamentals, RBAC

PROFESSIONAL EXPERIENCE

Web Developer — Cambridge Children's Learning and Development Inc. *Jul 2025 – Mar 2026*

- Maintained and enhanced a production HR platform used by 138 employees across 16 preschool centers, sustaining consistent uptime through proactive troubleshooting and targeted fixes.
- Automated GPS-based geofencing validation, clock-in alerts, and shift scheduling, reducing manual HR processing effort across all branch locations.
- Documented and enforced Role-Based Access Control (RBAC) across 4 distinct user roles, strengthening data security and eliminating unauthorized access incidents.
- Implemented structured audit logging for all critical user actions, improving data traceability and compliance readiness across 16 distributed sites.
- Conducted systematic functional and regression testing cycles, identifying and resolving defects that improved application reliability and data accuracy.

Web Development Intern — Cambridge Children's Learning and Development Inc. *Jun 2025 – Jul 2025*

- Contributed to development and upkeep of an internal HR management platform used by operations staff across multiple campuses.
- Redesigned key UI components to improve accessibility and streamline staff workflows, reducing onboarding friction for new users.
- Participated in full SDLC activities, requirements gathering, system design sessions, and workflow planning with cross-functional, non-technical stakeholders.
- Supported delivery of a property management application using SQL, Supabase (PostgreSQL), and Appsmith, handling data modeling and UI configuration.

PROJECTS

AI Resume Screening Pipeline | *n8n · Google Gemini · Supabase · IMAP Automation*
github.com/Vercii/ai-resume-screening-pipeline

- Architected an end-to-end AI-powered recruitment automation workflow in n8n that ingests incoming job applications by email and applies configurable scoring and decision logic.
- Designed a multi-stage validation pipeline (attachment verification, PDF validation, corrupted-file handling, SHA-256 duplicate detection) that runs before any AI evaluation, mirroring the structured process-mapping and exception handling used in business process automation.
- Integrated Supabase PostgreSQL and Storage to persist applicant metadata, AI evaluation results, and resume files, producing structured, auditable decision records.

- Built automated notification workflows covering every outcome branch: successful processing, duplicates, unsupported files, and corrupted attachments, demonstrating end-to-end ownership of an automated business process from intake to resolution.

Containerized Task Manager | *Docker · Node.js · PostgreSQL · Docker Compose*
github.com/Vercii/containerized-task-manager

- Built a full-stack task management app with a Node.js REST API and PostgreSQL, orchestrated with Docker Compose and auto-executing database initialization scripts for reproducible deployments.
- Implemented RESTful API endpoints supporting full CRUD operations with persistent PostgreSQL volume storage, ensuring data durability across container restarts.
- Implemented auto-executing database initialization scripts on container startup, guaranteeing reproducible environments and consistent schema setup across any deployment target.
- Containerized the entire stack using Dockerfiles and Compose workflows, enabling local-to-production environment parity and significantly simplifying team onboarding.

Serverless Notes Web App | *AWS Amplify · Lambda · API Gateway · Cognito*
github.com/Vercii/aws-serverless-notes-V2 | Live: main.d3i1c30pbgufzf.amplifyapp.com

- Deployed a serverless application using AWS Amplify, Lambda, API Gateway, and Cognito, applying IAM least-privilege access control across the stack.
- Designed and implemented 5+ Lambda-backed REST API endpoints to support core CRUD operations, integrating cleanly with the Amplify-hosted frontend.
- Configured Cognito user pool authentication and IAM least-privilege policies, enforcing secure identity management and access control across the full stack.
- Integrated all frontend and backend services within a scalable serverless architecture with continuous deployment tied directly to version control for streamlined releases.

KADIMA — Mobile Campus Navigation App | *Capstone · 1st Place, Engineering Exhibit 2026*
github.com/Vercii/KADIMA

- Led a cross-functional team to build a campus navigation app using a Dijkstra's-algorithm pathfinding engine and graph-based data modeling across 10+ buildings; managed sprint planning and task allocation end-to-end.
- Designed and implemented the core pathfinding engine using Dijkstra's Shortest Path Algorithm, enabling accurate real-time route computation across multiple buildings and floors.
- Built graph-based data structures to model the full campus layout, supporting multi-floor navigation across 10+ buildings with efficient path resolution.
- Directed end-to-end project management including sprint planning, task allocation, and technical decision-making throughout the full development lifecycle.

EDUCATION & TRAINING

Bachelor of Science in Computer Science — University of the East, Caloocan *2022 – 2026*

- AWS Cloud Practitioner Essentials (Amazon Web Services) - core AWS services, cloud concepts, security & billing
- NDG Linux Essentials (Cisco Networking Academy) - CLI, file permissions, shell scripting, process management
- Cisco Networking Basics (Cisco Networking Academy) - TCP/IP stack, routing, DNS, network security fundamentals
